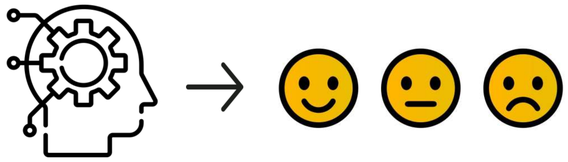
Background

Music Information Retrieval (MIR)

- Score-based cues encoded by the composer
- Pitch, Mode, and Nominal Key

Music Emotion Recognition (MER)



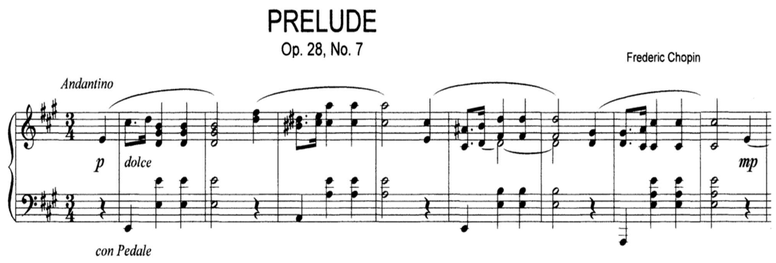
- Performance cues that can be manipulated by the performer
- Loudness and Timing information

Compositional Score Encodings

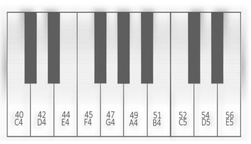
Performance Interpretations

Methods

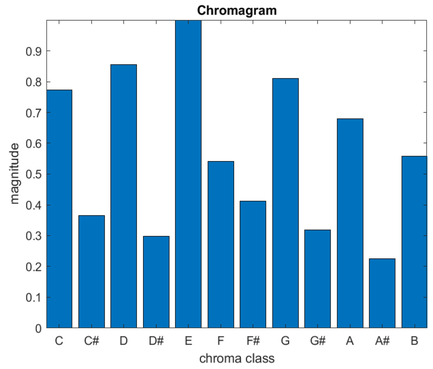
MIRtoolbox 1.8.1



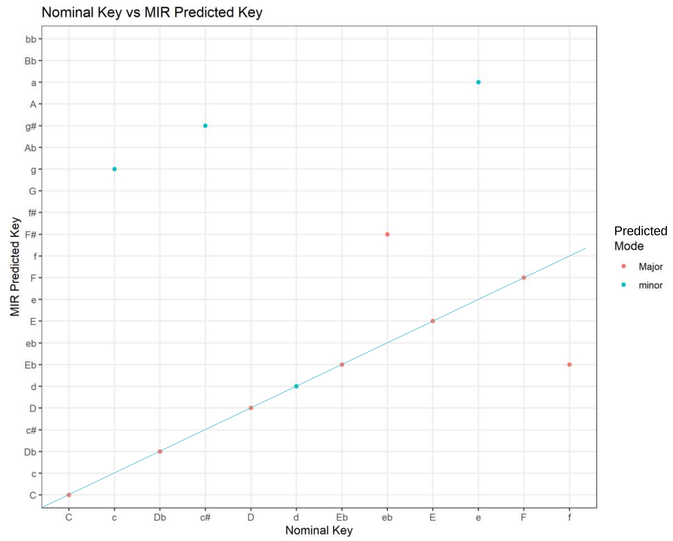
Attack Rate **Mode** **Pitch** **Loudness**

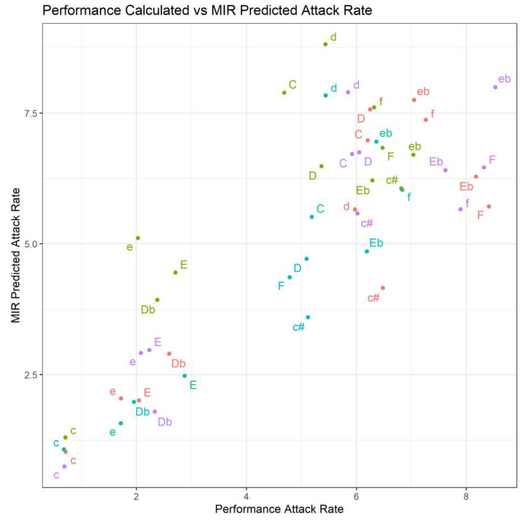


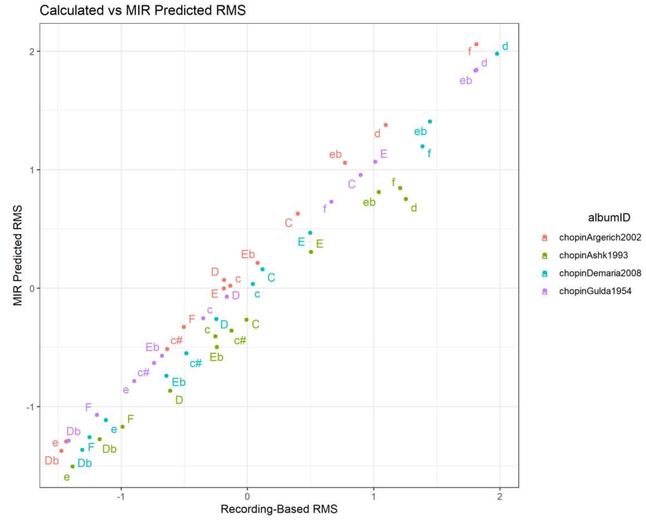
Findings



Estimated Key = C major
Mode Rating = 0.16292
Tempo = 107.0236 bpm
Number of Onsets = 40
RMS Rating = 0.074639







Summary

- We compared algorithmic predictions of features to score-based analyses and found generally reliable results at detecting the relative strength of each chroma class (pitch), but inconsistencies in all other cues except loudness (RMS) features.
- Many studies use MIRToolbox for automatic music analysis but relying on the accuracies of the feature extraction algorithms may lead to misleading results.
- Possible future directions include implementing ground truth datasets as other methods of improving machine learning algorithms.
